In recent years, clinical laboratories have undergone major changes in the way they carry out their health care task. The changes have been caused by the incorporation of new technologies, the computerization of nearly all processes and the introduction of a “management culture”. This has resulted in the concentration of the activity in large laboratories that have adopted different models depending on the population served and on their ownership status. Emergency laboratories, defined as those clinical laboratories where a fast response time is required, have also been involved in this process resulting in different organization models with the aim to deliver an adequate response to the needs of the health service of our country.

The main goal of this Symposium is to provide a forum for the interaction between professionals, the discussion of different proposals, the sharing of experiences and the presentation of possible solutions for the most contentious processes associated with stat tests.

The meeting has been structured in four sessions dealing with: the emergency laboratory models, the effect of the ISO 15189 accreditation on urgent analyses, some critical issues of stat tests and the proposals of the *in vitro* diagnostics industry for emergency laboratories. The format of the Symposium will involve open debates among different experts from emergency laboratories and representatives of the *in vitro* diagnostics industry. The active participation of the delegates in the discussion will be encouraged.
